

Similar to 'struct' in C  
but what is the difference?

```
const hello = { a: 0, b: 1, c: 2 };
```

object name

Also like dictionary in python.  
What's the difference?

(object name).(key name)  
(object name)["(key name)"]

★ variable of for-of loop  
is always a string.  
so when you code json

only this  
can work.
