

Error

i) Syntax ii) runtime. other.

ex) no pw input from user.

ex) no wifi / storage etc..

if (~) { return 0; } ← intuz case it just ENDS.

~

← else X

if (0 == 0) { console.log("error ~"); }

Try Catch Finally

try { ~ ~ }

catch (err) { console.error(err); } ← when error : pause and go to
← doesn't quit.

finally { (loading bar) }

console.log("finished"); ← end here.

err.name err.message 2 = 같은 class 생성

throw err! 해킹된 자식 error. quit.

let err1 = class Error(" ~ ")

err.name

err.message

* class pwError extends Error

error of 71

js: 11:11 ← letter.
↑ line

* Where to use try-catch

Func error.

Call func → try-catch

code cpu usage. 大
